NOV BONDSTRAND® FIBERGLASS PIPE

NOV Bondstrand® fiberglass piping systems are engineered to deliver long-term, corrosion-free performance in the most demanding operating environments. Trusted globally for decades, Bondstrand pipe systems provide a proven alternative to carbon steel and lined piping—reducing lifecycle costs, minimizing maintenance, and improving operational reliability.

Under the NOV Global Service Network Agreement, IAL is authorized to provide labor and technical services in support of NOV Fiber Glass Systems products, combining NOV's global Fiber Glass technology with local technical expertise, logistics coordination, and project support to deliver world-class products with dependable regional service.

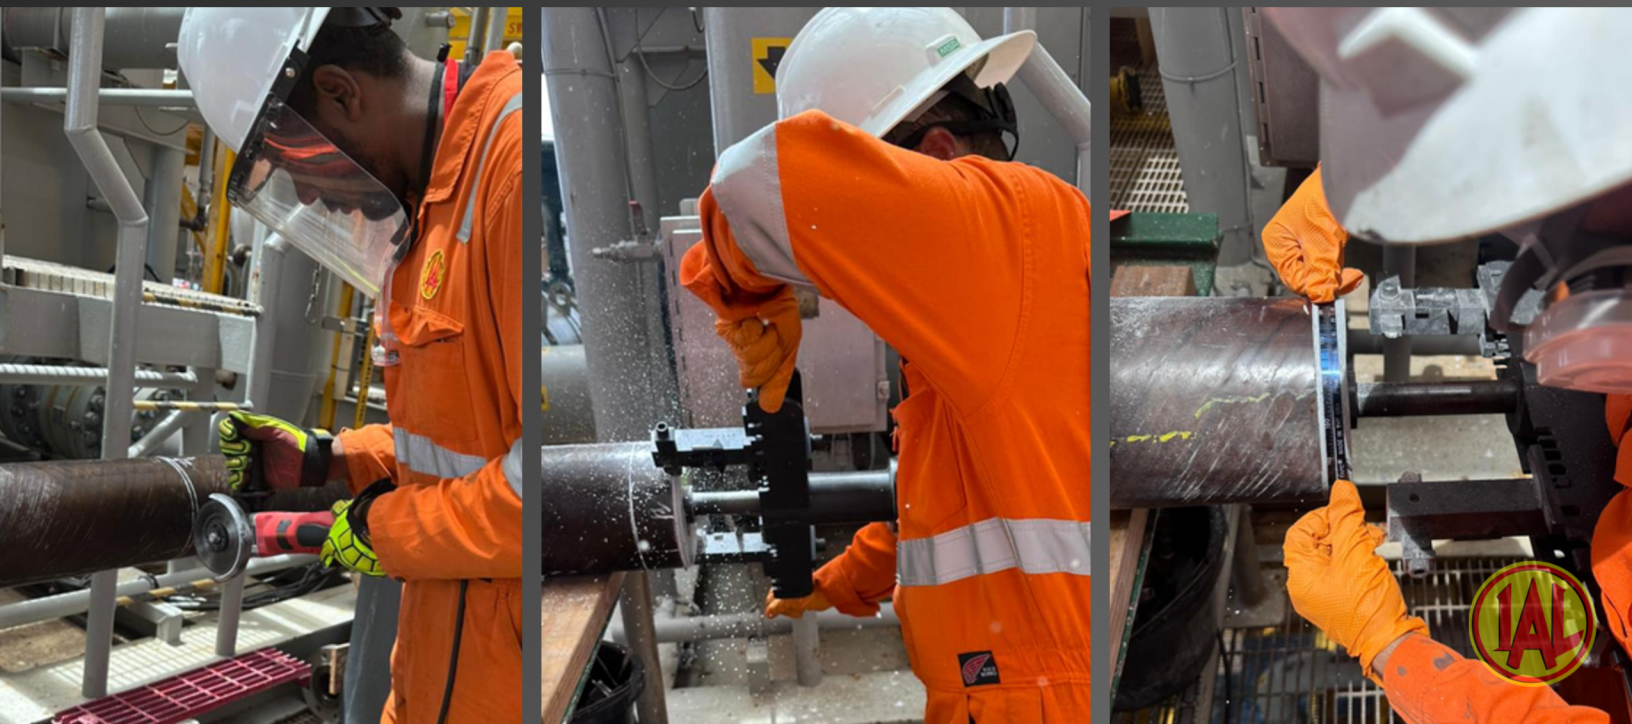

CERTIFIED INSTALLATION EXPERTISE

The long-term performance of fiberglass piping depends on correct installation. Through the NOV Bondstrand® and IAL partnership, customers have access to trained and certified technicians who ensure every installation meets manufacturer standards and project specifications.

IAL supports projects with Bondstrand-trained and certified technicians, qualified in:

- Proper pipe handling and storage
- Joint preparation and assembly
- Adhesive bonding and curing procedures
- Alignment, supports, and anchoring
- Pressure testing and commissioning support
- Compliance with NOV installation manuals and international standards

This ensures each system is installed correctly the first time—minimizing rework, delays, and long-term performance risk.

MARRS® OFFSHORE HANDRAIL SYSTEMS

NOV MARRS® Offshore Handrail Systems provide a robust, modular, and corrosion-resistant access solution for offshore platforms, FPSOs, and marine facilities. Engineered to perform in harsh marine environments, MARRS handrails improve personnel safety while reducing installation time and long-term maintenance requirements.

What we provide:

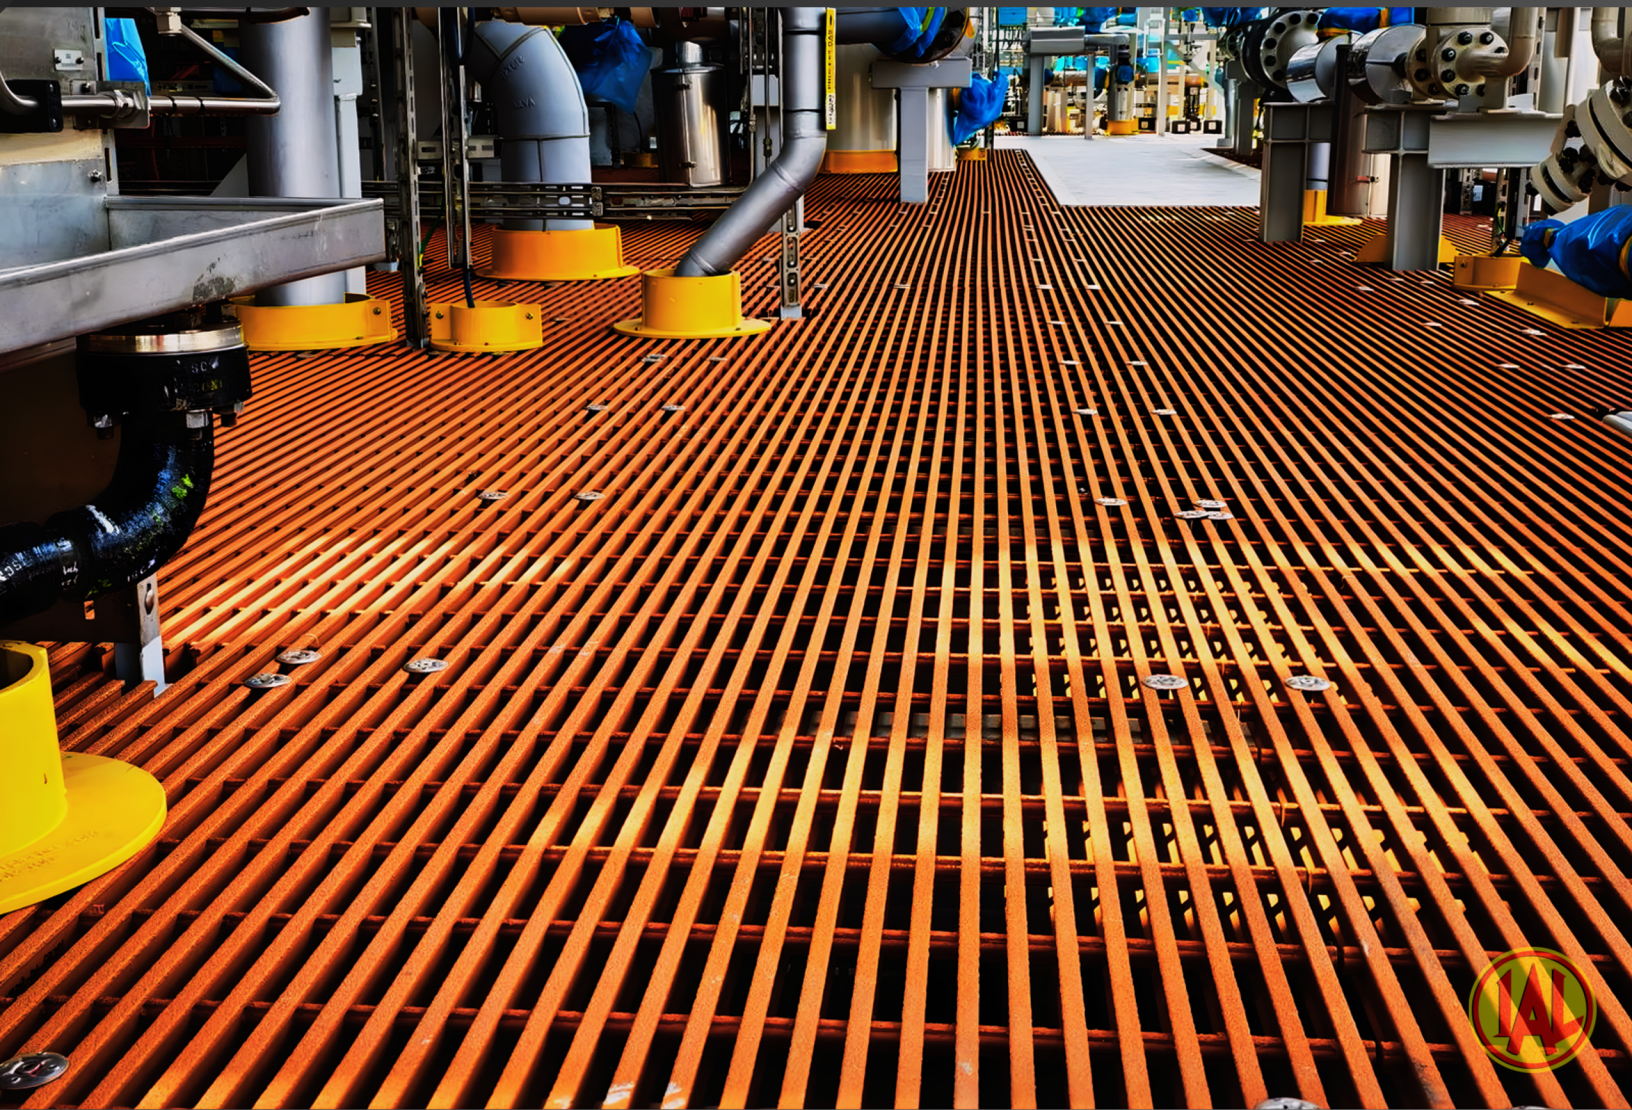

- Authorized distribution of NOV MARRS® systems
- Technical support during design and layout
- Assistance with specification and material take-offs
- Logistics coordination and regional delivery
- Trained and certified technicians for installation guidance
- On-site support during critical installation stages

FIBERGLASS GRATING & FLOORING SYSTEMS

NOV Fiberglass Grating and Flooring Systems are designed to deliver safe, lightweight, and corrosion-resistant access solutions for industrial, offshore, and infrastructure applications. Manufactured using advanced resin systems and reinforced fiberglass construction, NOV gratings provide long-term performance where steel flooring systems degrade rapidly.

Through our partnership with NOV, IAL supplies and supports fiberglass grating and flooring systems, combining global technology with local expertise, logistics coordination, and installation support.

FIBERGLASS LADDERS & GATES

Designed to withstand harsh environments, Fiber Reinforced Polymer (FRP) ladders and gates provide a durable, corrosion-resistant solution for safe access in industrial, offshore, and infrastructure facilities. Unlike traditional steel systems, fiberglass ladders and gates do not corrode, require minimal maintenance, and maintain long-term structural integrity even in aggressive conditions.

Our Fiberglass ladder and gate systems are available in a range of configurations, including:

- Fixed vertical ladders
- Caged ladders
- Access ladders and platforms
- Swing and self-closing safety gates
- Custom-fabricated access solutions

We work closely with clients to ensure proper sizing, layout, and compliance with project requirements.
